

SOLENIA

Game Concept

For several millennia, the tiny planet Solenia has lost its day-and-night cycle: Its northern hemisphere is forever plunged into darkness and its southern hemisphere is eternally bathed in sunlight.

Your mission is to carry on your ancestors' honorable task of traveling the world to deliver essential goods to the inhabitants of both hemispheres. While the Day people want you to deliver stones and water, rare in their hemisphere, the Night people sorely need wood and wheat to survive. Be efficient and outpace your opponents to collect the most gold stars by the end of the game!

Contents

- 1 Giant Airship figurine
- 5 double-sided gameboard strips
- 48 Delivery tiles
- some star-shaped Gold tokens
- 15 resources each of 4 types: wood, wheat, stone, water
- per player: 16 Airship cards and 1 player board
- 24 Improvement tiles
- 1 die for the solitaire game

*The rest of these rules are about the game using the summer side of the player boards, for 2–4 players.
The other versions are explained at the end of the rules and in the appendix (solitaire game).*

Setup

- 1 Assemble the gameboard by arranging the 5 strips in either the order **night/night/dawn/day/day**, or the order **day/day/dusk/night/night**.

- 2 Place the Giant Airship figurine on the middle space of the middle strip.

- 3 Sort the Delivery tiles and arrange them in 2 face-down decks: a Day deck and a Night deck. Create a display as follows:

2- or 3-player game: Reveal 3 Day tiles and 3 Night tiles.
4-player game: Reveal 4 Day tiles and 4 Night tiles.

- 4 **Each player:** Choose a player color, and set the player board of that color in front of you, summer side ☀️ up.

- 5 **Each player:** Shuffle the deck of Airship cards of your chosen color to form your personal deck, and place it face down to the left of your board.

- 6 The player who most has "their head in the clouds" is the first player.

3-player game: Give the 3rd player 1 wood.

4-player game: Give the 3rd player 1 wood, and the 4th player 1 stone.

Place your resource on a storage space of your player board.

- 7 Place the Gold tokens and the resources nearby, in reach of everyone, to form the reserve.

- 8 **Each player** draws the first 3 cards from their personal deck. Now the game can commence!

- Resources are not limited by the components. If you run out, use a substitute.
- Leave the Improvement tiles in the box: They are not used when playing the game using the summer side of the player boards.

Before your first game, from each card, carefully remove the disc that obscures the porthole.

Playing the Game

The game spans a series of rounds, during each of which, each player plays one card from their hand. The game ends when each player has played all 16 of their cards.

Starting with the first player and continuing clockwise, **each player MUST play a card on the gameboard**, which is composed from the strips.

You must respect the following rules:

- You must place the card **on an empty space** (i.e. one without a card in it) on a strip of the gameboard.
- **Adjacency rule:** The space must be **adjacent to the Giant Airship figurine** (A) or **another card you already played** (B).

- You are totally allowed to play a card in the Giant Airship's space (if it has no card, of course)!
- In the very rare case that it is impossible to play a card adjacent to the Giant Airship or one of your cards, you must either lengthen your voyage (see below), or simply discard a card from your hand to advance the Giant Airship (resolve this according to the "Advancing the Giant Airship" paragraph on page 3). With the second option, you do nothing else on your turn!

Lengthening a Voyage

It is possible for you to lengthen your voyage, which is to say not respect the adjacency rule. In order to do this, you must spend one resource (from your storage) per space (empty or occupied) between the Airship or one of your cards, and the space you wish to reach. Discard the resources you used this way, returning them to the reserve.

Note: The resources can be of any type(s).

You can play the card on either of the following:

- a floating production island.
- a floating city.

Floating Production Island:
Wood/Stone/Wheat/Water

Floating City:
Day/Night

Playing on a Floating Production Island

Gain as many resources as the value of the card you played (either 0, 1, or 2 resources) of the type corresponding to this space (visible through the porthole in the card). Place each resource you gain on a storage space on your player board.

Important: You can never keep more than 8 resources. If you ever have more than 8, you must immediately discard resources of your choice until you have only 8.

Spaces adjacent to the Giant Airship

Spaces adjacent to another card you already played

Example:

Noémie spends a stone and a wood to be able to place a card 3 spaces away from one of her cards (2 empty spaces lie between them).

Example:

Anaëlle plays a value-2 card on a floating wood production island; she immediately gains 2 wood, which she places on her storage spaces.

Playing on a Floating City

Gain as many gold stars as the value of the card you played (*either 0, 1, or 2 stars*).

Then, you **MUST** fulfill a **Delivery** tile by delivering the resources depicted on it.

• If the floating city is a day city, the Delivery tile must be a day tile.

• If the floating city is a night city, the Delivery tile must be a night tile.

Take the Delivery tile and place it in the leftmost empty slot of your player board: day tiles go above it, night tiles go below it. Return the delivered resources to the reserve, and immediately reveal a new Delivery tile of the same type to refill the display.

Placing a Delivery tile immediately earns you the bonus depicted by the slot on your player board (*you earn the bonus after the display has been refilled*):

1. 1 wood (day) / 1 stone (night)
2. 1 wheat (day) / 1 water (night)
3. 1 wood or 1 wheat (day) / 1 stone or 1 water (night)
4. 1 wood and 1 wheat (day) / 1 stone and 1 water (night)
5. 5 gold stars (day) and (night)
6. 5 gold stars (day) and (night)

Advancing the Giant Airship

When you play a value-0 card (on either a floating production island or a floating city), the Giant Airship immediately moves 1 space straight forward.

At the end of your turn, resolve the power (see next page: Powers of Expelled Airship Cards) of each card on the first strip. Then, return these cards to their respective owners' discard piles. Flip the first strip over and place it as the last strip; then, shift all the strips to keep the board in the same position on the table.

At the end of your turn, draw the first card of your deck to refill your hand to 3 cards (*except for the last 2 turns of the game, of course*).

End of the Game

The game ends after everyone has played all 16 of their cards (*and after resolving any expelled cards, if the Giant Airship advanced*).

Your first 4 day/night pair of tiles earns you gold stars (1 gold star if you have 1 pair, 3 gold stars if you have 2 pairs, 6 gold stars if you have 3 pairs, 10 gold stars if you have 4 or more pairs). For every 2 remaining resources on your storage spaces, regardless of their types, you also earn 1 gold star. Add the gold stars of your Delivery tiles and all those earned over the course of the game. The player with the most gold stars wins. In a tie, the tied players share the victory.

Example:

Madeline plays a value-1 card on a floating night city (1).

She gains 1 gold star, then she delivers 1 wood and 2 wheat (2) to claim the corresponding night Delivery tile.

She places the Delivery tile in the first empty night slot (3), which grants her 1 water (4).

Example:

Noémie played a value-0 card on a floating night city (1). So, she immediately advances the Giant Airship figurine (2). She returns a wood, a stone, and two wheat to complete the night delivery (3), and places the Delivery tile in the first empty night slot below her board.

At the end of her turn, she resolves the power of each card on the first strip: **Noémie** receives 1 stone and 1 wheat, thanks to her expelled value-0 card (4), while **Madeline** receives 1 water, thanks to her expelled value-1 card (5). **Noémie** places her value-0 card in her discard, and **Madeline** places her value-1 card in her discard.

Finally, **Noémie** flips the first strip and moves it to the last position, and shifts all the strips to keep the gameboard in the middle of the table (6).

Powers of Expelled Airship Cards

1 2

Gain 1 or 2 resources produced by the island on which the card was lying (or gold stars if it was on a city).

Gain 1 copy of each resource indicated on the card, regardless of the type of island/city on which the card was lying (here a stone and a wheat).

Gain 1 copy of the resource indicated on the card, regardless of the type of island/city on which the card was lying (here a wood).

Gain 1 gold star if the card was on an island that produces the resource indicated on the card.

Example:

Anaëlle gains 1 gold star ① thanks to her value-2 card (her card is on a floating wood production island) and 2 water ② from her value-0 card (two resources produced by the island on which her card is lying). **Noélie** gains 2 gold stars ③ thanks to her value-0 card (her card is on a city). **Madeline** gains 1 water ④ thanks to her value-1 card (1 water regardless of the type of island/city on which her card is lying).

The Game Using the Winter Side of the Player Boards

Setup

Identical to the game using the summer side of the player boards, but use the winter side ❄️ of your player boards; rather than having one day/night slot for each of levels 1–6, this side has two day/night slots each of levels 1–3.

Playing the Game

The game plays exactly the same way as the game using the summer side of the player boards, except for the following:

When you claim a Delivery tile, rather than simply placing it in the first empty matching (day/night) slot of your player board, you must choose which slot you wish to activate, respecting this rule: A power can only be activated if there is already a lower-level power activated in the same row. In the same way, a second power at the same level can only be activated if there are already 2 lower-level powers activated in the same row.

Example: In order to activate a level-2 day power, you must already have a level-1 day power activated. In order to activate a level-3 day power, you must already have a level-1 day power and a level-2 day power activated. In order to activate the second level-2 day power, you must already have two level-1 day powers activated. In order to activate a second level-3 day power, you must already have two level-1 and two level-2 day powers activated.

- On the winter side of your player board, you have only 6 storage spaces.
- Over the course of the game, you can increase your storage capacity by two spaces, increasing your total to 8.
- At the end of the game, day/night pairs of tiles do not earn gold stars.

The Game with the Improvement Tiles

Setup

Identical to the game using the winter side ❄️ of your player boards.

Then, reveal as many level-1 Improvement tiles as there are players.

Form as many level-3 Improvement tiles as there are players by making random pairs of a day half-tile and a night half-tile (the powers of the two half-tiles must be different).

Starting with the last player and going in reverse turn order, each player chooses a level-1 or a level-3 tile. Then make a second round of selections, choosing the other level, so you each end up with a level-1 and a level-3 tile.

Each player places their 2 Improvement tiles on the spaces designated for this purpose on their player board, respecting the level (level 1 / level 3) and the type (for level 3, day half-tile / night half-tile).

Playing the Game

The game plays identically to the game using the winter side of the player boards, except that your powers have changed.

In order to activate the level-1 Improvement tile, you must have Delivery tiles on both sides of the Improvement tile; however, you can activate each level-3 half-tile independently: A Delivery tile on the night slot activates the night half-tile; a Delivery tile on the day slot activates the day half-tile.

Example:

During setup, Madeline took a level-1 Improvement tile, which she immediately placed on the space of her player board provided for this purpose. She did the same for the two parts of her level-3 Improvement tile.

Over the course of the game, she fulfills a day delivery, but she still cannot use her level-1 Improvement tile. In order to do so, she first will need to fulfill a night delivery, and place it across from the day Delivery tile.

The powers of the winter side of the player boards and the Improvement tiles are explained in the appendix.
